WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (1).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

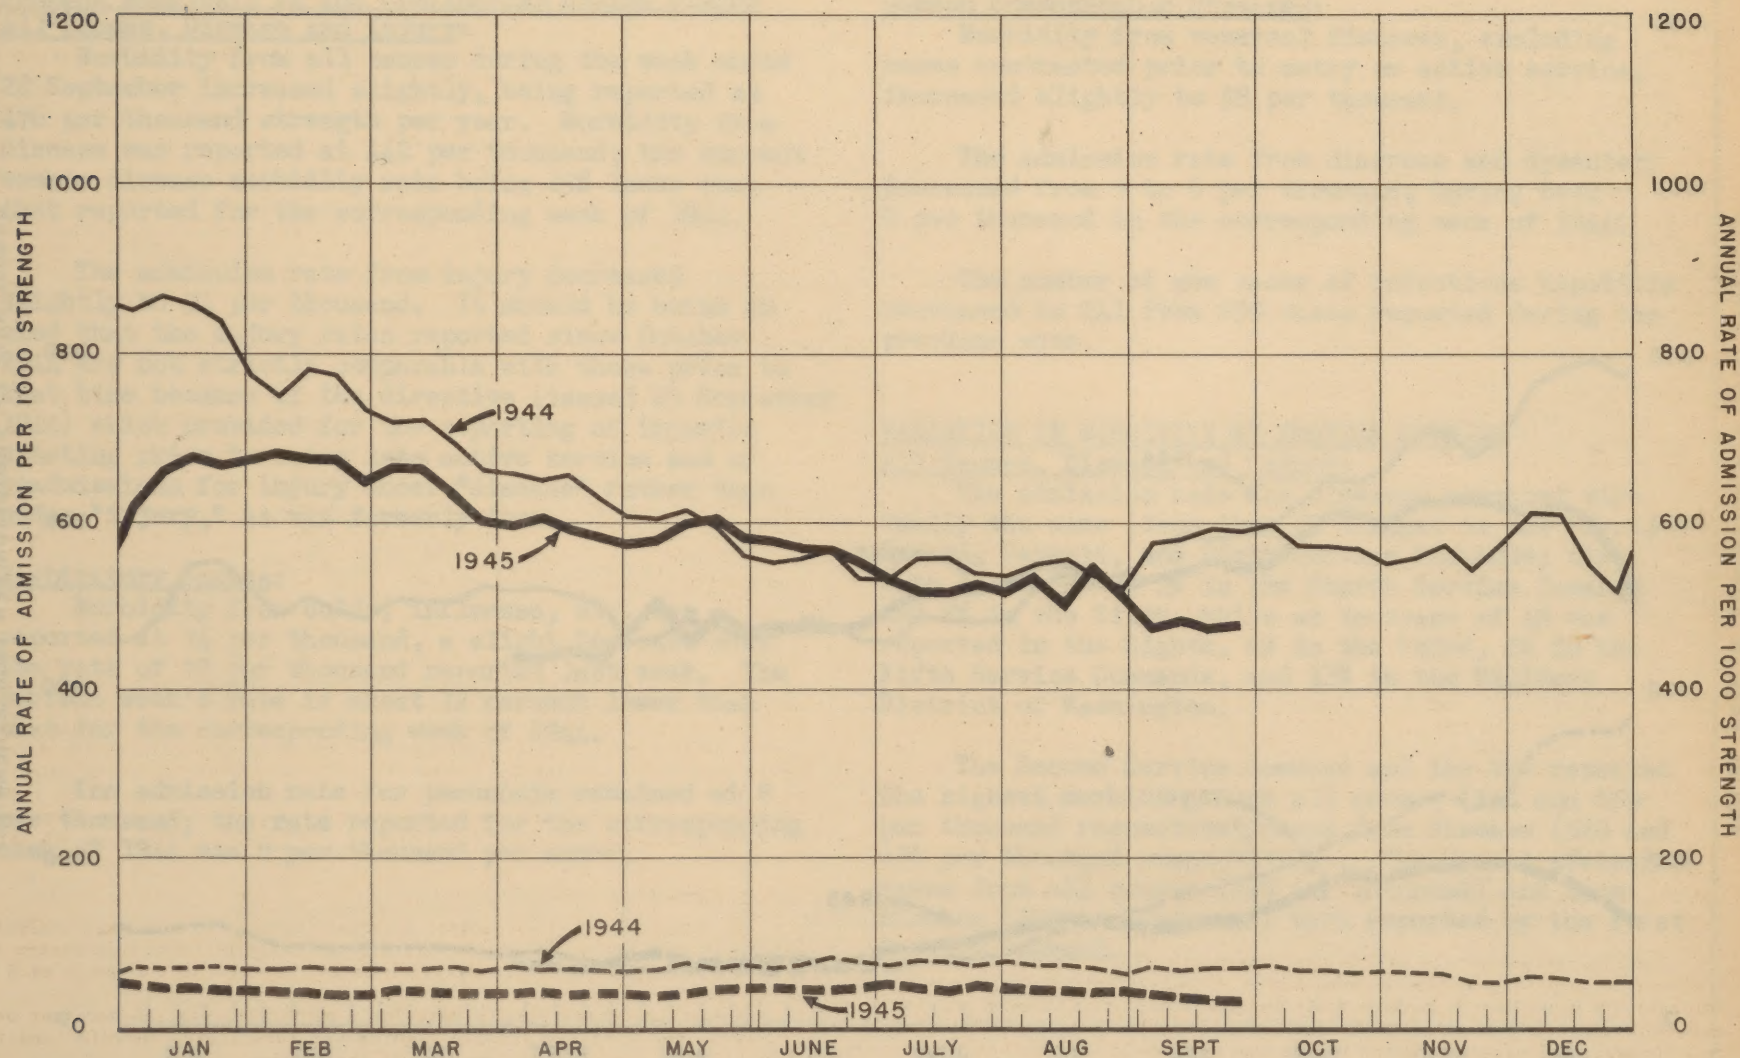

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATESAll Causes, Disease and Injury:

Morbidity from all causes during the week ended 28 September increased slightly, being reported at 476 per thousand strength per year. Morbidity from disease was reported at 442 per thousand; the current week's disease morbidity rate being 15% lower than that reported for the corresponding week of 1944.

The admission rate from injury decreased slightly to 34 per thousand. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury," as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 74 per thousand, a slight increase over the rate of 72 per thousand reported last week. The current week's rate is about 12 percent lower than that for the corresponding week of 1944.

The admission rate for pneumonia remained at 8 per thousand; the rate reported for the corresponding week of 1944 was 7 per thousand per annum.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, increased slightly to 58 per thousand.

The admission rate from diarrhea and dysentery decreased from 7 to 6 per thousand, having been 9 per thousand in the corresponding week of 1944:

The number of new cases of infectious hepatitis decreased to 241 from 258 cases reported during the previous week.

VARIATION IN MORBIDITY BY SERVICE COMMANDAll Causes, Disease and Injury:

The admission rate for diseases remained virtually the same (less than 3% change) in the First, Second, Seventh, and Ninth Service Commands; the rate decreased by 5% in the Fourth Service Command and 8% in the Sixth, while an increase of 4% was reported in the Eighth, 6% in the Third, 8% in the Fifth Service Commands, and 11% in the Military District of Washington.

The Second Service Command and the MDW reported the highest morbidity from all causes (544 and 659 per thousand respectively) and from disease (520 and 636 per thousand respectively). The lowest admission rates from all causes (399 per thousand) and from disease (377 per thousand) were reported by the First Service Command.

COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth and Ninth Service Commands reported the highest morbidity from injury (40 and 43 per thousand respectively). All other Commands reported rates of less than 40 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. increased in all Service Commands except the Sixth, Seventh, and Eighth. The MDW reported the highest morbidity from these causes (140 per thousand), while the lowest was registered by the First Service Command (47 per thousand). All Service Commands except the MDW had rates under 85 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases, increased in all Service Commands except the Fifth and Seventh.

Morbidity from diarrhea and dysentery was relatively low, all Service Commands reporting rates of 7 per thousand or less except the Fifth.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 24.1 per thousand strength for the week ended 28 September as compared with 32.7 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 74.5 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 28 September 1945:

The number of neuropsychiatric cases remaining was 26,797 or about 2700 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 42,300. The number of battle casualty patients remaining decreased by about 4800 to number 83,162.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 28 September there were 11,905 enlisted personnel discharged by CDD, an increase of about 1500 over the previous week. Forty-four percent of these discharges were reported by General Hospitals and 39 percent by Convalescent Hospitals. Among these CDD's were 3229 neuropsychiatric cases, an increase of about 800 over the previous week.

COMMENT ON RECENT DEVELOPMENTS

FOR THE FIVE WEEK PERIOD ENDED 31 AUGUST 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Forms 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the five week period ended 31 August 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This Report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc. are presented on page 25. Similar charts for specified diseases appear on pages 26, 29, and 30. A chart showing mortality trends is presented on page 31. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the Service Commands is given on pages 32 and 33. The most pertinent morbidity data for individual stations are presented on pages 34 to 55. On pages 56 and 57 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States remained virtually unchanged during August, being reported at 522, as compared with 519 for the previous month. The rate for diseases increased slightly (by 2%), to 478 per thousand per year, while that for injuries decreased from 48 in July to 44 for August.

Relatively large increases in disease morbidity rates in August as compared with July were recorded in the Military District of Washington (20%), and the Second, and Seventh Service Commands (14%, and 10% respectively). The rate decreased in the First Service Command (6%) and the Fifth Service Command (9%). Little change is noted in other service commands.

The admission rate for injury decreased in all Service Commands except the Military District of Washington, where a slight increase occurred (34 per thousand in July to 35 per thousand in August). Decreases in excess of 10% were reported in the First,

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

Third, and Fourth Service Commands. Highest morbidity from injury was reported in the Fourth and Eighth Service Commands, with rates of 51 per thousand.

RESPIRATORY DISEASES:

During August the admission rate for common respiratory diseases increased slightly over the July rate (77 per thousand to 79 per thousand). The rate of 67 per thousand reported for August, 1944, is 18% under that reported for the current month.

Increases (all more than 10%) were reported in the First, Second, and Third Service Commands, and in the Military District of Washington, where the rate moved from 75 per thousand in July to 130 per thousand in August. The rate remained virtually unchanged in other service commands, although a decrease of 7% was reported in the Eighth Service Command.

Morbidity from all forms of pneumonia remained at 8.2 per thousand, about 45% above the rate reported for August, 1944. Approximately 75% of all pneumonia admissions were classified as "atypical".

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery increased from 7 per thousand to 8 per thousand in August, but the rates continued lower (about 30%) than those reported in the same periods last year. Only the Second and Fourth Service Commands reported rates in excess of 8 per thousand per annum.

VENEREAL DISEASES:

Morbidity from Venereal Diseases, excluding

cases contracted prior to entry into service, continued to increase. The August rate of 53.0 per thousand was higher than any admission rate recorded since Pearl Harbor, and represented an increase of 14% over the previous month's figure.

The rate for syphilis acquired while in service increased slightly, from 5.0 per thousand in July to 5.2 in August, while that for venereal diseases other than syphilis and gonorrhea moved from .8 per thousand to 1.0.

Venereal disease rates increased in all service commands except the Ninth, where the rate remained unchanged. Morbidity from these causes increased over 40% in the Military District of Washington; over 16% in the Second, Third, Seventh and Eighth Service Commands, and 10% to 15% in the Fourth, Fifth and Sixth Service Commands.

Morbidity represented by venereal EPTS cases was reported at 6.9 per thousand during August as compared with 9.6 per thousand for July. Variations in the admission rate for venereal EPTS cases as between Service Commands have relatively little significance, because they reflect differing geographical and racial distributions of new inductees. The average weekly number of venereal EPTS cases in August was 461.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis decreased slightly to 2.9 per thousand from 3.0 per thousand in July which was the highest rate reported since the epidemic in the summer of 1942.

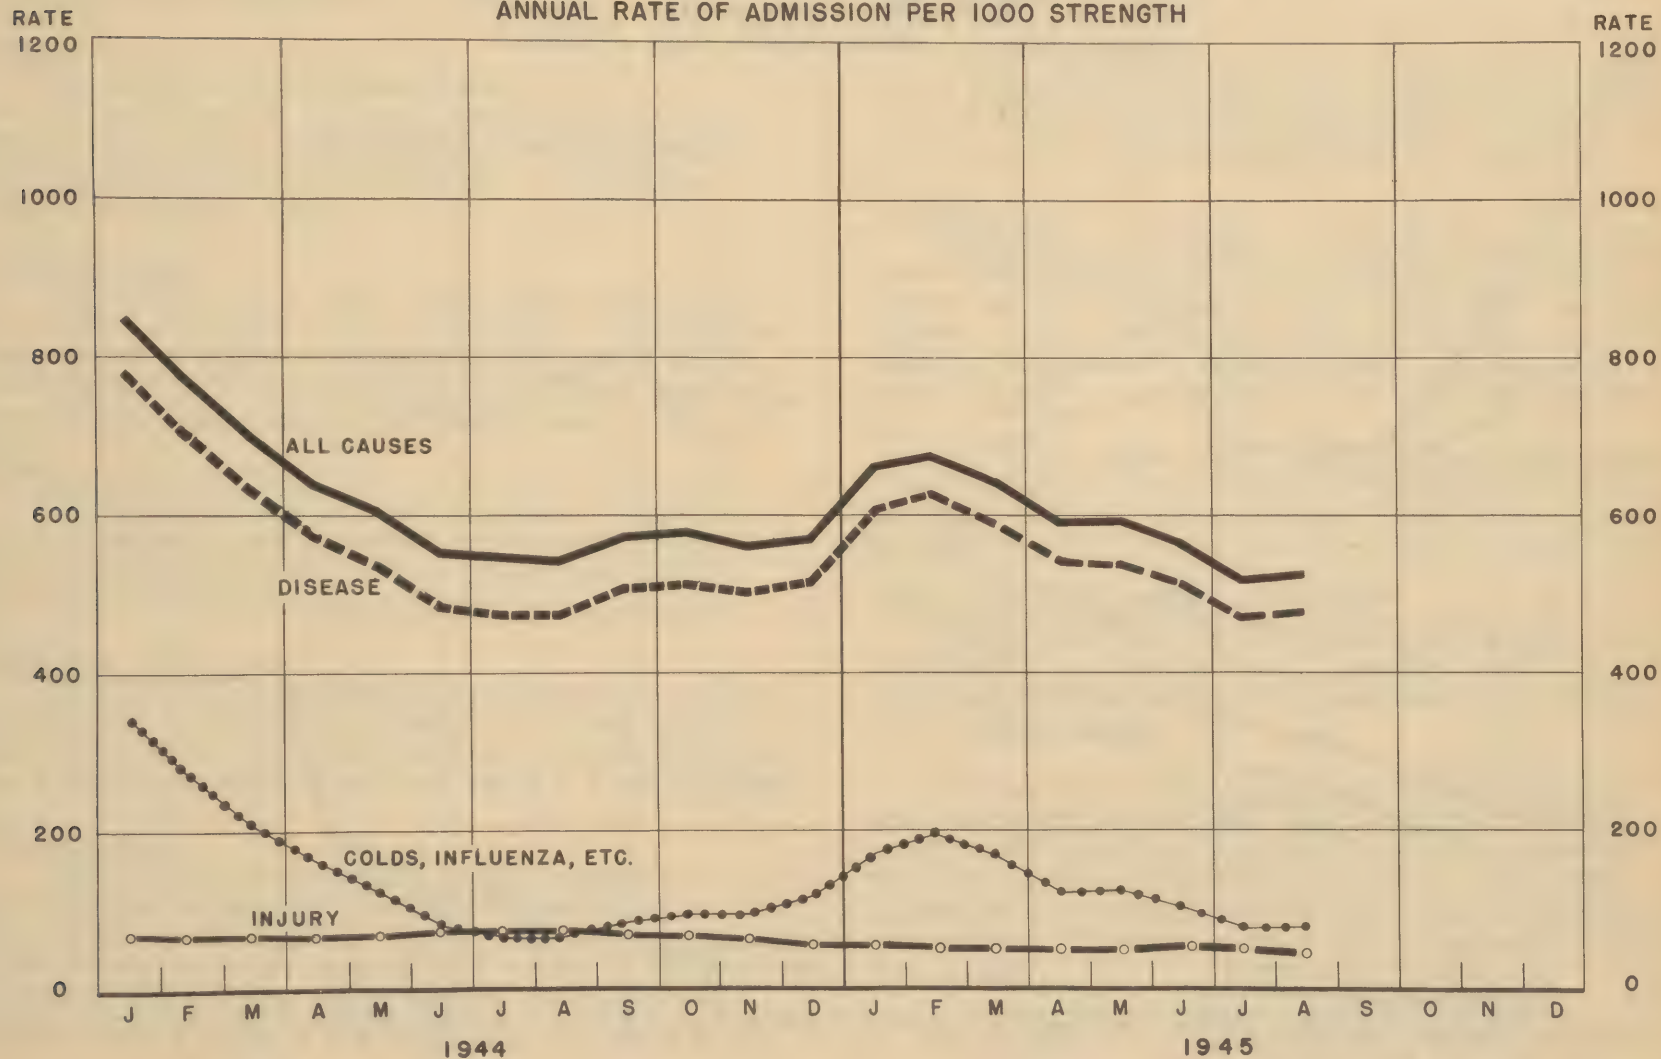

MEASLES:

Morbidity from measles decreased more than 50 per-

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

cent during August but was 50% above the corresponding rate experienced for August 1944.

MUMPS:

Morbidity from mumps decreased by over 40 percent in August to 1.9 per thousand, which is the lowest figure registered this year, although this rate is about 25 percent above the corresponding figure for August 1944.

SCARLET FEVER:

Morbidity from scarlet fever decreased by about 30 percent in August to be reported at .2 per thousand. The admission rate for August 1945 was about 30 percent lower than for August 1944. The Ninth Service Command reported a rate of .3 per thousand.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis decreased by 50 percent in August to be reported at .2 per thousand. The current experience is about 35 percent lower than that during the corresponding period of 1944.

RHEUMATIC FEVER:

Morbidity from rheumatic fever decreased 28 percent during August being reported at .5 per thousand. The First, Fifth, and Sixth Service Commands reported the highest morbidity from this cause (.8 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 1.4 per thousand in August, a decrease from the rate of 1.5 per thousand in July. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at

stations other than separation centers was only 1.2 per thousand in August.

As of 31 August there were 2381 cases of tuberculosis remaining under treatment, representing .8 percent of all patients in hospitals. Of the total cases, 1070 were at Fitzsimons GH and 865 at Bruns GH.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at .1 per thousand in August. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 750 per week, which is the lowest figure so far recorded this year.

As of 31 August there were 2027 cases of malaria under treatment, representing .7 percent of all patients in hospital. Of these, cases were acquired in this country.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders decreased by over 5 percent in August to 36.8 per thousand, which is the lowest rate reported since August 1944.

During July there was an average of 2545 CDD's per week given to enlisted men classified as neuropsychiatric cases, or slightly lower than the weekly average for July (2640 CDD's per week). The CDD's in August for men with neuropsychiatric disorders represented 27 percent of all CDD's, as compared with 31% in July.

The number of neuropsychiatric cases remaining

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

under treatment as of 31 August was 32,974 or about 2000 less than at the end of July. During August the number of locked ward cases decreased by about 500 to 4855, while the open ward cases decreased by 5 percent. Neuropsychiatric cases remaining represented 11.5 percent of all patients in hospital, with open ward cases being 9.8 percent and locked ward cases 1.7 percent.

MORTALITY:

Mortality from all causes during August was reported at 2.19 per year per thousand strength. The mortality rate from disease was .74 per thousand in August while the reported mortality rate from injury decreased from 1.85 per thousand to 1.33 per thousand.

It should be noted that the reporting of deaths on Forms WD AGO 8-122 is not complete, particularly for deaths from injury for which the understatement may be as great as 10 percent (see Special Report on

Deaths in 1944 in Weekly Health Report, Vol. V, No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 1.45 per thousand, resulting in an estimated total death rate from all causes of 2.19 per thousand.

NON-EFFECTIVE RATE:

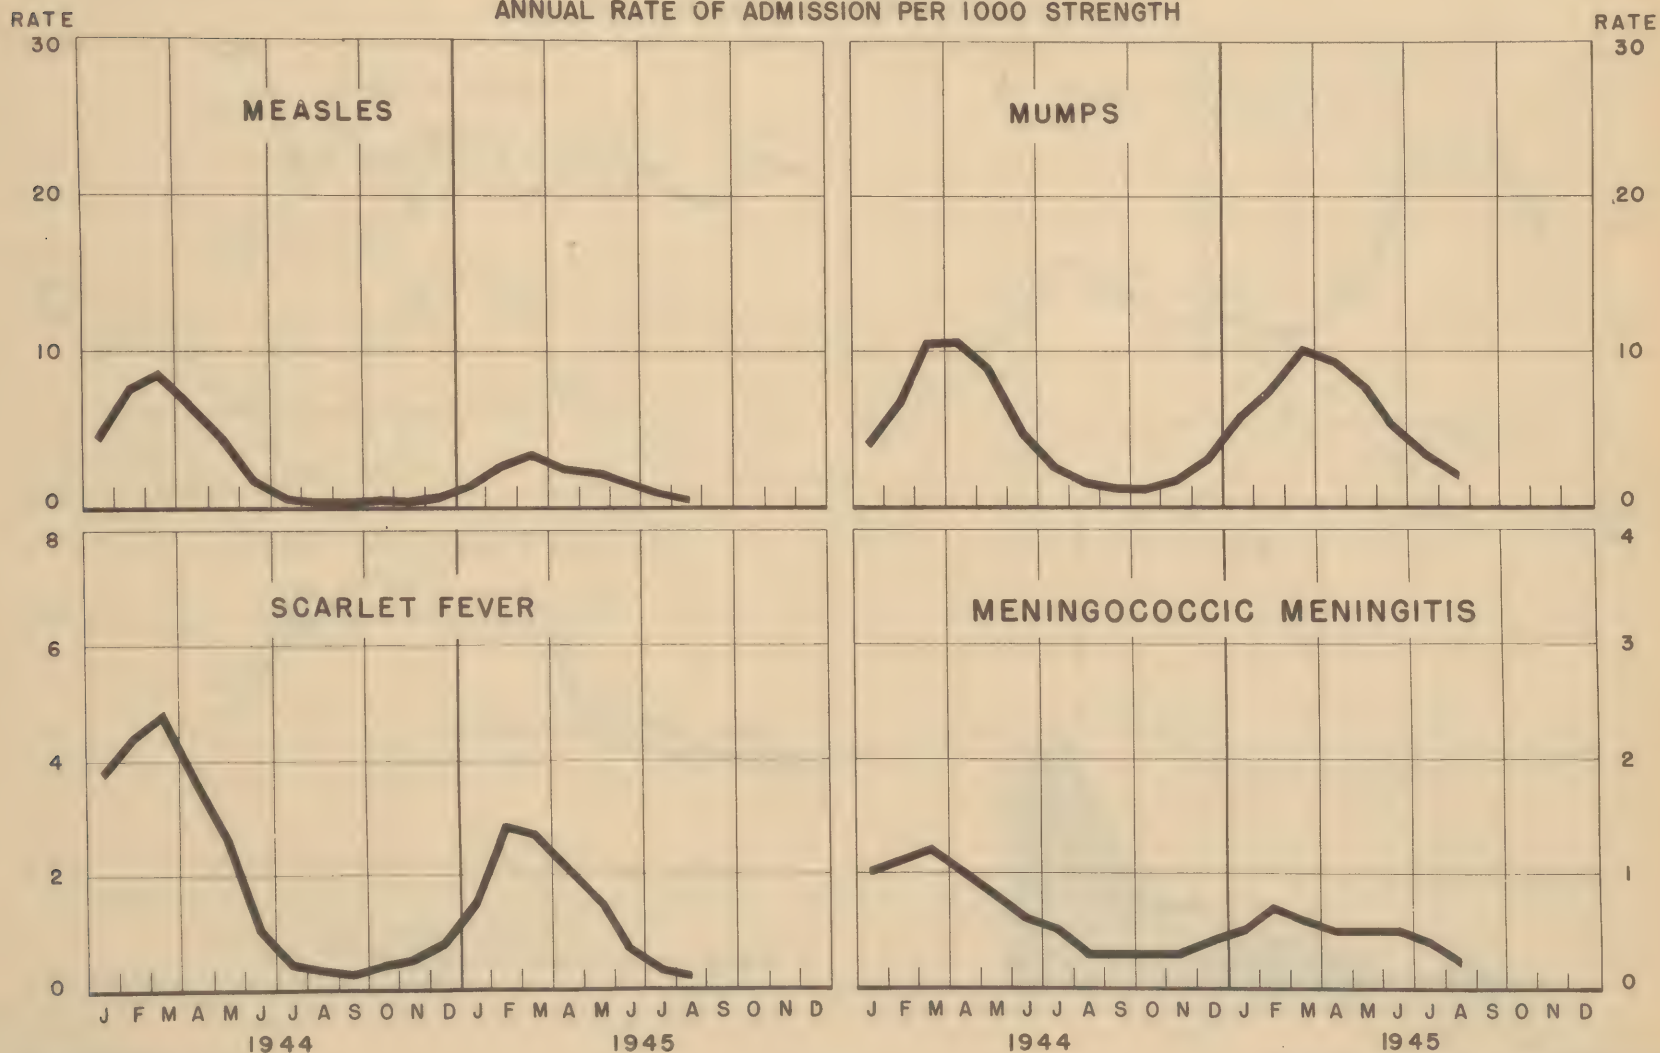

The non-effective rate for Army personnel stationed in this country was about 27 per thousand in August, or about the same as that reported for July

The mean number of non-effectives (including evacuees from overseas) for August was reported at 86 per thousand strength, or 10 percent lower than in July; most of this decrease arose because of a decrease in hospital population at General and Convalescent Hospitals. The mean number of injury non-effectives per thousand strength decreased in August to 14.2 per thousand from 15.9 per thousand in July.
